PROFESSIONAL SUMMARY

I'm a recent computing graduate (MTU, 2026) with hands-on experience using many tools including spring boot and CI/CD tools like Jenkins. I have experience in full stack development which I gathered during my internship at Aspen Grove Solutions, I am seeking a Graduate Software Engineer role to help me keep learning and build on my already obtained skills.

EDUCATION

Bachelor of Science in Computing with Software Development	2026
Munster Technological University	Tralee, Co Kerry
Software Development	2022
Kerry College of Further Education	Tralee, Co Kerry

WORK EXPERIENCE

Junior Software Developer	January 2025 – August 2025
Aspen Grove Solutions	Tralee, Co Kerry
- Worked in their software development team which oversaw maintaining and adding new features for all the web applications used by their clients. - Helped with migrating out of date systems to MVC architecture performing tasks like building repository layers and coding controllers. - Logged my tasks in Jira and used tools like git extensions and svn to collaborate and communicate my work with my team members. - Learned how to develop new features from concept to reality along with taking older features and updating them to look and perform better.	
Games Stall Attendant	Summer 2022
Funderland	Tralee, Co Kerry
- Handled cash transactions accurately and responsibly during high intensity shifts while dealing with a high volume of customers. - Provided friendly, welcoming customer service to visitors of all ages while performing in a fast-paced, high-energy environment. - Stayed calm and professional while dealing with unexpected events and helping answer any queries from customers on the spot. - Communicated efficiently while working closely with colleagues to keep the stall running smoothly and not allowing for a queue to pile up during peak times.	

PROJECTS

GymSYS-Asp.net

- I had made a software engineering project based on a typical gym system in 2nd year of my degree in college which used outdated tools like webforms and was not developed using any separation or architecture, in this project I took this old project and updated it to use the MVC architecture along with asp.net and razor pages.
 - I converted it because I had done this during my time at Aspen Grove Solutions and I liked the original concept but not how it was built as it was very messy.
- My full tech stack for this project was ASP.NET MVC 5, C#, .NET Framework 4.7.2, SQL Server Express, T-SQL, Stored Procedures, ADO.NET, Razor, Bootstrap 3, jQuery, jQuery Validation, Repository Pattern, Service Layer, Dependency Injection (Unity.Mvc5), MSTest, Moq

Football Stats Dashboard – Spring Boot/ React

- I am currently in the process of building a full-stack dashboard that displays football statistics as a personal project which combines my interest in football and learning new technologies as I am using a Java Spring Boot REST Api for the backend and React for the frontend, it also uses JWT-based authentication allowing users to login.

My full tech stack for this project is Java, Spring Boot, Spring Security, JWT, REST APIs, React, JavaScript, PostgreSQL, Maven

TECHNICAL SKILLS

Languages | Python, JavaScript, Java, C#, SQL, HTML, CSS

Frameworks | Flask, ASP.NET MVC, Entity Framework

Developer Tools | Git, Docker, Jenkins, Visual Studio Code, Eclipse, JIRA, Visual Studio

Libraries | Pandas, NumPy, Matplotlib, Bootstrap, jQuery,
